EXECUTIVE SUMMARY

Business Analyst with over 6 years of experience delivering enterprise data integration, analytics, AI-assisted solutions, and business automation across multinational technology and retail organisations. Experienced in designing scalable data pipelines, developing advanced SQL solutions, building reporting frameworks, and transforming complex business requirements into reliable, data-driven solutions that improve operational efficiency and business decision-making.

Currently supporting Google's retail programmes across the Nordics, Germany and Poland, alongside Samsung's retail operations across the Nordic region through Snowflake data platforms, Python automation, Salesforce administration, and enterprise analytics solutions. Passionate about applying modern analytics, Generative AI, and data engineering practices to solve complex business problems while continuing to expand expertise in modern analytics, AI, and cloud data platforms.

PROFESSIONAL HIGHLIGHTS

- Delivered enterprise analytics and data integration solutions supporting Google's retail programmes across the Nordics, Germany and Poland, and Samsung's retail operations across the Nordic region.
- Engineered scalable Snowflake SQL and Python data pipelines that reduced a business-critical reporting process from approximately 2 working days to 2 hours.
- Designed and delivered an enterprise reporting platform that replaced a subscription-based solution while improving reporting efficiency, reliability, and scalability.
- Developed reusable data models, automated validation frameworks, and quality assurance processes that improved data integrity and supported reliable business decision-making.
- Applied Generative AI responsibly to accelerate solution design, SQL development, documentation, and process optimisation while ensuring all outputs are validated before production use.

CORE TECHNOLOGIES

Data & Analytics: Advanced SQL, Snowflake, Data Analytics, Data Modelling, ETL/ELT Pipeline Design, Data Integration, KPI Reporting, Business Intelligence, Tableau, Power BI

Programming & Automation: Python, Google Apps Script, REST APIs, SOQL, Workflow Automation, Reporting Automation

AI & Modern Analytics: Generative AI, Prompt Engineering, AI-assisted Solution Design, AI-assisted SQL Development, AI-assisted Documentation, AI-assisted Process Optimisation

Business Analysis: Requirements Engineering, Stakeholder Management, End-to-End Solution Design, Process Optimisation, Root Cause Analysis, UAT, Production Support

Enterprise Platforms: Salesforce Administration, CRM Data Quality, User Lifecycle Management, Security, Google Workspace, Enterprise Data Warehouses

Data Quality: Data Validation, Data Quality Assurance, Automated Validation Frameworks

PROFESSIONAL EXPERIENCE

WorkShop International AB | Sweden

Business Analyst – Data Integration & Business Automation (2020 – Present)

Primary Clients: Google (Nordics, Germany & Poland) | Samsung (Nordics)

- Design and deliver scalable enterprise data integration and analytics solutions, transforming business requirements into production-ready data pipelines, analytics platforms and reporting solutions.
- Design, develop, and optimise Snowflake ETL/ELT pipelines using advanced SQL and Python to support multi-country retail analytics, reporting, and operational decision-making.
- Develop and maintain automated data workflows using Python and Google Apps Script that improve reporting efficiency, reduce manual effort, and increase data reliability.
- Design reusable data models, automated validation frameworks, and quality assurance processes that improve data consistency, reporting accuracy, and confidence in business decisions.
- Collaborate with business stakeholders, technical teams, and end users to gather requirements, define analytical solutions, perform root cause analysis, translate business needs into scalable data solutions, and deliver reliable data products.
- Administer Salesforce including user provisioning, permissions, CRM data quality, and governance for over 150 users supporting more than 1,600 retail locations.
- Apply Generative AI responsibly to accelerate solution design, SQL optimisation, technical documentation, and development while ensuring all outputs are validated before production deployment.

Key Achievements

- Reduced Google's multi-regional reporting process from approximately 2 working days to 2 hours using automated Snowflake datasets and Python scripting.
- Designed and delivered an enterprise reporting platform that replaced a subscription-based solution while improving scalability, reliability, and operational efficiency.
- Developed reusable Snowflake stored procedures and automated validation processes that improved scalability and data consistency.
- Supported Samsung reporting and analytics initiatives across the Nordic region.

EDUCATION

Master's-Level Studies in ICT for Development | Stockholm University, Sweden

Advanced coursework in IT Management, Strategic IT, Technology-Enabled Change, Risk & Decision Analysis, and Computer Science Project Work.

Postgraduate Studies in Information Technology | KTH Royal Institute of Technology, Sweden

Completed coursework in Mobile Business, organisational dynamics, and technology management.

Master of Computer Science (MCS) — Al-Khair University, Pakistan

Bachelor of Science (BSc), Computer Science — Bahauddin Zakariya University, Pakistan
