EXECUTIVE SUMMARY

Business Analyst with over 6 years of experience delivering enterprise data integration, process automation and business analytics solutions across multinational technology and retail organisations. Currently delivering enterprise data integration and automation solutions supporting Google's retail programmes across the Nordics, Germany and Poland, alongside Samsung's retail operations across the Nordic region. Experienced in bridging business requirements with hands-on technical execution through Snowflake data pipelines, advanced SQL, Python automation and Salesforce administration. Proven track record of transforming manual multi-day operations into efficient automated business processes. Experienced in partnering with cross-functional stakeholders to deliver enterprise data solutions that improve operational efficiency, reporting accuracy and business decision-making while using Generative AI responsibly to accelerate solution design, documentation and development.

Eager to contribute strong data integration, automation and enterprise analytics expertise while continuing to expand capabilities in cloud-based AI and modern data platforms.

PROFESSIONAL HIGHLIGHTS

- Support international retail initiatives for Google across the Nordics, Germany and Poland, and Samsung across the Nordic region.
- Engineered an automated Snowflake SQL and Python framework that reduced a business-critical reporting cycle from approximately 2 working days to 2 hours.
- Designed and delivered an in-house Snowflake-to-Google Sheets enterprise reporting platform, replacing a subscription-based reporting solution.
- Administer Salesforce for 150+ active users across 1,600+ retail locations.
- Designed reusable Snowflake stored procedures and automated validation routines that improved data quality and maintainability.

CORE TECHNOLOGIES

Data Engineering & Analytics: Snowflake, SQL (Advanced), ETL/ELT Pipeline Design, Data Integration, Data Quality Assurance, Data Validation, Data Modelling, Tableau, Power BI

Automation & Development: Python, SOQL, Google Apps Script, REST APIs, Enterprise Workflow Automation, Reporting Automation

Enterprise Platforms: Salesforce Administration, User Lifecycle, Security, Google Workspace, Enterprise Data Warehouses

Business Analysis: Requirements Engineering, End-to-End Solution Design, Stakeholder Management, Process Optimisation, Root Cause Analysis, UAT, Production Support

AI: Generative AI, Prompt Engineering, AI-assisted Solution Design, AI-assisted SQL Development, AI-assisted Documentation

PROFESSIONAL EXPERIENCE

WorkShop International AB | Sweden

Business Analyst – Data Integration & Business Automation (2020 – Present)

Primary Clients: Google (Nordics, Germany & Poland) | Samsung (Nordics)

- Design and deliver enterprise data integration projects, converting business requirements into reliable production data pipelines and reporting solutions.
- Design, develop and maintain scalable Snowflake ETL pipelines using advanced SQL and Python for multi-country retail programmes.
- Build enterprise automation solutions using Python and Google Apps Script to improve operational efficiency and reduce manual effort.
- Administer Salesforce including user provisioning, permissions, security, CRM data quality and governance for 150+ users supporting over 1,600 retail locations.
- Collaborate with business stakeholders and technical teams to gather requirements, perform gap analysis, coordinate testing and deliver scalable solutions.
- Investigate production issues across data pipelines and CRM platforms, perform root cause analysis and implement sustainable long-term fixes.
- Use Generative AI responsibly to accelerate documentation, SQL optimisation and solution design, with all outputs validated before production use.

Key Achievements

- Reduced Google's multi-regional reporting process from approximately 2 working days to 2 hours using automated Snowflake datasets and Python scripting.
- Designed and delivered a Snowflake-to-Google Sheets enterprise reporting platform that replaced a subscription-based solution while improving reliability.
- Developed reusable Snowflake stored procedures and automated validation processes that improved scalability and data consistency.
- Supported Samsung reporting and analytics initiatives across the Nordic region.

EDUCATION

Master of Science (MSc), Information & Communication Technology — Stockholm University, Sweden
Coursework Completed

Master of Computer Science (MCS) — Al-Khair University, Pakistan

Bachelor of Science (BSc), Computer Science — Bahauddin Zakariya University, Pakistan

PROFESSIONAL DEVELOPMENT

- SnowPro Core Certification (In Progress)
- Continuous professional development in Generative AI, Modern Data Warehousing (Snowflake), Enterprise Automation and Cloud Data Platforms.
