EXECUTIVE SUMMARY

Business Analyst with over 6 years of experience bridging business requirements and technical delivery across enterprise data integration, systems, analytics and process automation. Experienced in requirements analysis, business-to-technical translation, stakeholder management, data and process analysis, and delivering scalable solutions that improve operational efficiency and decision-making.

Currently supporting Google retail programmes across the Nordics, Germany and Poland, alongside Samsung retail operations across the Nordic region. Combines business analysis with hands-on Snowflake, SQL, Python, Salesforce and automation expertise to translate business needs into reliable data, integration and process solutions, with practical experience applying Generative AI to analysis and business workflows.

PROFESSIONAL HIGHLIGHTS

- Delivered enterprise data integration and automation solutions for Google retail programmes across the Nordics, Germany and Poland, and Samsung retail operations across the Nordic region, translating business requirements into scalable technical solutions.
- Translated complex business requirements into technical requirements, data models, transformation rules and integration workflows, coordinating with stakeholders from initial request through implementation and validation.
- Designed and automated Snowflake SQL and Python data workflows that reduced a business-critical reporting process from approximately 2 working days to 2 hours.
- Delivered data integration, automation and reporting solutions across Snowflake, Salesforce and Google Workspace, connecting business processes with reliable enterprise data.
- Designed and currently maintain a Salesforce Data Management framework documenting client data streams, sources, ingestion and transformation processes, update frequencies and operational procedures.

CORE TECHNOLOGIES

Business Analysis: Requirements Gathering & Analysis, Business-to-Technical Translation, Stakeholder Management, Process Analysis, Backlog Management, Requirements Traceability, Gap & Impact Analysis, Root Cause Analysis, UAT Support, Solution Validation

Data & Integration: Snowflake, Advanced SQL, Data Integration, ETL/ELT, Data Modelling, Data Source & Flow Mapping, Data Lineage, Integration & Dependency Analysis, Data Reconciliation, SOQL

Programming & Automation: Python, Google Apps Script, Process & Workflow Automation, Reporting Automation, Data Validation Automation

Enterprise Platforms & Analytics: Salesforce Administration, CRM Data Quality & Governance, User & Access Management, Google Workspace, Tableau, Power BI, KPI & Enterprise Reporting

AI & Emerging Technology: Generative AI, AI Use-Case Analysis, Prompt Engineering, AI-Assisted Data Analysis, AI-Assisted Solution Design, AI Output Validation

PROFESSIONAL EXPERIENCE

WorkShop International AB | Sweden

Business Analyst – Data Integration & Business Automation (2020 – Present)

Primary Clients: Google (Nordics, Germany & Poland) | Samsung (Nordics)

- Gather, analyse and document business and technical requirements, translating operational needs into data models, transformation rules, integration workflows, automation and reporting solutions.
- Manage client support and development requests through Asana, maintaining backlog priorities, requirements traceability, dependencies and stakeholder updates from initial request through implementation and completion.
- Map and manage end-to-end data flows across source systems, ingestion processes, Snowflake transformations, Salesforce and downstream reporting, identifying interfaces, dependencies and business rules.
- Design, develop and optimise Snowflake ETL/ELT workflows using advanced SQL and Python, integrating multiple data sources into reliable enterprise datasets.
- Design and develop automated workflows using Python and Google Apps Script to streamline business processes, reduce manual effort and improve operational efficiency and data reliability.
- Perform root cause analysis and support solution validation through data reconciliation, integration and regression testing, defect investigation, correction and retesting, UAT support and production support.
- Administer Salesforce, managing user access and permissions, CRM data quality, business processes and operational governance for 150+ active users across 1,600+ retail locations.

Key Achievements

- Transformed a Google retail data process spanning 15+ recurring inputs across the Nordics, Germany and Poland, using Snowflake, SQL and Python automation to reduce weekly processing from ~2 working days to ~2 hours.
- Designed and delivered a Snowflake-to-Google Sheets integration platform replacing a subscription-based solution, automating six operational datasets and validating 26,000+ records during production testing.
- Led technical analysis of a retail data-model transformation, tracing impacts across Snowflake tables, stored procedures, historical data, mappings, targets and Tableau reporting; validated through reconciliation and regression testing.
- Automated Adidas Finance reporting across ~12 source files, translating business rules into validation and consolidation logic and reducing ~6 hours of manual reconciliation per cycle; resolved data-integrity defects through correction and retesting.

EDUCATION

Master's-Level Studies in ICT for Development | Stockholm University, Sweden

Advanced coursework in IT Management, Strategic IT, Technology-Enabled Change, Risk & Decision Analysis, and Computer Science Project Work.

Postgraduate Studies in Information Technology | KTH Royal Institute of Technology, Sweden

Completed coursework in Mobile Business, organisational dynamics, and technology management.

Master of Computer Science (MCS) — Al-Khair University, Pakistan

Bachelor of Science (BSc), Computer Science — Bahauddin Zakariya University, Pakistan
